

Safety is a question of age

Dear Parents,

as children get older, their mobility and urge to explore grows and with it the dangers and risks. Everyday situations such as hot plates, stairs or an unlocked medicine cabinet can have tragic consequences. In order for the little ones to be able to explore their environment independently, they need a safe environment.

Make the world childproof with us!

0-6 months

In the first weeks of life, babies are mainly asleep. Their movements are initially uncoordinated and reflexive.

Accident black spots:

- Falls (e.g. from the changing table)
- Suffocation (e.g. by bed covers or small parts that can be swallowed)
- Transport accidents (e.g. falls from baby car seat)

6-12 months

Children become more and more mobile, feel objects and put them in their mouths. In addition, they make their first attempts to move around by sealing and crawling.

Accident black spots:

- Falls
- Accidents caused by baby walkers
- Choking due to small parts that can be swallowed

12-24 months

This age phase is mainly determined by curiosity and the urge to explore. Toddlers begin to be able to pull themselves up to stand on furniture and walk on their own.

Accident black spots:

- Burn / scald
- Impact injuries / falls
- Electrical accidents
- Poisonings
